

DUST CONTROL SYSTEM

DUST CONTROL SYSTEM

The nebulization system on side brushes avoids the lifting of dust during work. A scented disinfectant can be added to the water tank to increase the effectiveness of the cleaning.

It is applicable to all Agile Max 108 and Max 109 versions. You can add a scented disinfectant to existing water in the tank. It is activated, only with the brushes running, by means of a simple lever on the control panel.

The Kit consists of:

1. Water filter
2. 30 L water tank
3. Stainless steel support
4. 24 volt water pump
5. A steel bar with 2 interchangeable fan nozzles
